

Important information regarding previous hydraulic and hydrologic assessments available on the IDNR, Division of Water website

The Permit and FARA models gathered here are electronic copies of the input files to various modeling programs either submitted to or developed by the Indiana Department of Natural Resources, Division of Water (IDNR) in the process of reviewing and approving projects or determining floodplain information. However, it is the user's responsibility to verify that the models obtained from this site match what has been approved in IDNR files. We strongly suggest that users of these models examine the respective FARA / Permit files at IDNR to assure that the downloaded files match the approved files. If changes are needed to the files obtained here to assure that they match, it is the user's responsibility to make these changes, not IDNR.

The FIS and LOMR models available on this website are, to the best of our knowledge, electronic copies of the input files to various modeling programs used to calculate the water surface profiles and floodway limits for the respective Flood Insurance Studies. However, the IDNR does not guarantee these models to be the legal models for FEMA purposes. It is the user's responsibility to confirm that these models are the effective models for the FIS in question. Please refer to the FEMA website (www.fema.gov) for information on how to obtain copies of this modeling.

All models are provided "as is" without any kind of guarantee as to their accuracy or applicability for a particular purpose. Even though every effort is made to provide accurate information, the user assumes all risks concerning the suitability and accuracy of the models downloaded from this web site. These models may contain technical inaccuracies or typographical errors. The State of Indiana, Department of Natural Resources, and the Division of Water assumes no responsibility for and disclaims all liability for any such errors in the models.

The Division of Water may make changes to these models at any time and without notice. We strive to have this modeling resource as complete and accurate as possible; any errors found in these models can be reported to the Division by Email at water_inquiry@dnr.state.in.us.

Division of Water staff can only provide limited assistance in interpretation or guidance regarding these models. For more information regarding the modeling process and IDNR's requirements, we recommend you consult the document [General Guidelines for the Hydrologic-Hydraulic Assessment of Floodplains in Indiana](#).
